

**The
Global Green
Company**

ABOUT US

The Global Green Company is a leading diversified producer of processed vegetables and fruits. With customers in more than 50 countries, including some of the world's most respected brands, our commitment lies in spreading health and happiness through good food. The Global Green Company is an active participant globally in the preserved vegetables and fruit markets. Thanks to large-scale, expert cultivation in the most suitable climatic zones and rapid processing of the raw material, the highest quality standards are ensured at all times. By using advanced technologies for preservation and labelling and efficient logistic, customers all over the world are happy with our product and service standards.

The Global Green Company was originally set up in 1992 as a joint venture between India's Thapar group and a European partner. In

1996, the Thapar Group – in a demonstration of its vision and commitment to the potential of Indian agriculture – acquired 100% stake in the entity.

Since its inception, The Global Green Company has been a pioneer and leader of the pickled cucumber business out of India. While a growing customer base and superior manufacturing facilities have contributed to the company's steady and consistent growth, strategic acquisitions have also played an important role in this process. Key milestones in our journey are as follows.

December 1999

Acquisition of VST Natural Products Ltd. – the foods division of Hyderabad based British American Tobacco associate – VST Industries

August 2006

Acquisition of Belgium based Intergarden N.V. and the complete Intergarden Group of Companies

September 2008

Acquisition of Puszta Konzerv Kft

The Global Green Company has four world class, strategically located production facilities in India and Hungary

- Venkatapur, Hyderabad, India.
- Oblapura, Bangalore, India.
- Dunakiliti Konzervüzem KFT, Hungary.
- Puszta Konzerv KFT, Hungary.

VISION

- To be the preferred partner for farmers improving their lives through sustainable agriculture and connecting them to global customers.
- A great value added processed food company providing innovative consumer led solutions, with exceptional food safety, quality and delivery standards.
- Be a trusted supplier to global retail private label and brand partners.
- Become the fastest growing food service partner in India and key markets.
- Making our brand "Tify" a household name for innovative premium food categories in India.

VALUES

- Integrity – in both personal and professional relationships
- Imagination – that drives our actions
- Individual – a commitment to valuing people

AGRICULTURE – OUR CORE STRENGTH

Agriculture is the bedrock of our seed to shelf model – the very foundation of our commitment to consistent quality and food safety in both product and process. We engage with over 20,000 farmers right from providing the optimum quantity of seeds to precise technical knowhow impacting yields and quality.

- Own, Multi-crop sourcing operations across South India and Hungary. Crop procurement network covering India and Europe
- Environmentally sustainable, socio-economically successful farming model
- R&D operations to monitor seed quality, enhance productivity and improve cultivation practices
- GMO free product, meeting international pesticide residue norms
- Fairtrade certification for Babycorn as a processor and exporter

QUALITY AND FOOD SAFETY:

Food Safety, Food Security and Quality is our first priority. We practice it every day. The Global Green Company's success has always been the consistent quality and safety of its products. Customer confidence in our products is based on our quality image

- GFSI benchmarked certification at HIGHER LEVEL –IFS/BRC/ ISO 22000:2005/ GMO Free
- USFDA Registered and Inspected, C-TPAT Compliant facilities
- Kosher ® and HALAL Certified facilities
- Our commitment to environment - ISO14001: 2002
- High level Social and Ethical compliance-Validated by Intertek Audit
- Factories directly audited and approved by leading Global Super Markets & Food Service Customers.

gherkins

India is the world's largest exporter of gherkins in the world. The Global Green Company processes more than 35,000 Metric tonnes of gherkins from its two facilities in India. With multi-product packing operations at both facilities and with the capability for both fresh and processed packs, we produce whole and cut produce, retail packs (glass jars and PET), foodservice packs (pouch and tins) and industrial packs (drums and pails).

Hungary produces 35,000 Metric tonnes of gherkins annually which is among the highest. Our multi product packing facility at Dunakiliti processes more than 6,000 Metric tonnes (wholes and cut) in retail (glass jar & PET) and foodservice (tins) packs.

jalapeño

With favourable climatic and soil conditions in the south of India, a variety of jalapeños are grown in healthy quantities. With one primary harvest season falling between the months of April and May India processes more than 10,000 metric tonnes of jalapeños each year.

The Global Green Company, with its stringent quality norms and as per International standards, grows and processes more than 5,000 metric tonnes of jalapeños. With multi-product packing operations at both facilities, we pack jalapenos (sliced and whole) in retail packs (glass jars and PET), foodservice packs (pouches and tins) and industrial packs (drums and pails).

Sour Cherries

cherr

Hungary is the largest exporters of sour cherries in Europe. Hungarian sour cherries are some of the best in the world as they are grown in continental climatic conditions which are most suitable for their production, adding nutritional value and taste

Our factory in Dunakiliti in the north-west of Hungary purchases high quality raw material and we process more than 4,000 metric tonnes of cherries (sour/sweet) per year in retail (Glass jars/cans and food service (cans) packs.

baby corn

baby corn

Baby Corn production demand is expanding worldwide, especially in Asia, Africa and South America, although historically and as of today, Asia still has the highest baby corn production and consumption globally.

While still a recent development in India, many farmers in different parts of the country are taking up contract farming for baby corn. This is a very highly adapted crop and grows well in a wide range of soil types.

The Global Green Company, with its expertise in agriculture and processed food, introduced baby corn production to its portfolio of crop production in 2013. Our Oblapura facility in Karnataka, India, currently processes more than 500 metric tonnes of baby corn in retail packs (glass jars). The Global Green Company is the only company in the world that is producing Fair Trade baby corn, which is currently being distributed and sold in Europe.

green peas

Hungary is at the southern part of the green pea growing belt in Europe. Our farmers ensure harvest of continuously fresh raw material within the short production cycle of around 30 days based on a carefully and meticulously created periodic sowing plan.

Our facility Puszta Konzerv Ltd processes 3300 metric tonnes of peas in 500 hectares with 20 varieties. With multi-product packing operation Puszta Konzerv can pack peas in both retail cans and glass jars

sweet corn

Hungary is among the world's largest operators in the market of sweet corn having the largest acreage in Europe. The country's climatic, topographical and soil characteristics make it suitable for the production of high quality sweet corn.

Our division Puszta KonzervKft, processes 25,000 Metric tonnes of sweet corn on 1,500 hectares annually, with a 70:30 ratio of super sweet to sweet varieties. Success of production is essentially determined by a variety of agricultural factors. Puszta can pack corn in retail packs (glass jars and cans).

capers

This is a Mediterranean wild bush that grows in the entire Mediterranean sea area and in Central Asia. Its fruits are edible and sold as caper berries. Capers have a strong, sourish taste and are in great demand for the production of sauces and pizzas and for garnishing dishes. Caper harvesting can only be done manually and is therefore a labor intensive activity mainly performed by the local rural population. The capers are picked daily, collected on the spot, pickled in brine or vinegar for preservation and packed in barrels. In the collecting points (Turkey and Morocco mainly) they are graded and then shipped in Barrels all over the world. Global Green offers capers and caper berries in barrels, but we also have a packaging line in Dunakiliti where they are pasteurized in all different sizes of Jars, even in the smallest jars possible

silver-skin onion

Our processing unit in Dunakiliti buys silverskin onions from producers who have a long tradition of onion production. Specialized in the growth and processing of onions, our farm partners take care of the entire production cycle from seed to harvest, to peeling and packaging. Our onions are grown in mostly light and sandy soil guaranteeing perfect growth of the bulb, which remains completely underground, thus preserving the pearl-white colour of the vegetable.

Moreover, since there is little opposition from the soil, the onions take a perfect regular shape and can be harvested quickly. Processing time is a key focus and within 12 hours our onions are harvested, dry-cleaned, and sorted according to size. We guarantee the highest standard of produce quality and food safety by adopting Global G.A.P. and HACCP operating procedures as well as safe delivery. All our onions are grown in Italy and Holland, and are exclusively non-GMO.
